

Capability Statement

Small Scale Wind Turbines

Green Cat Renewables

Green Cat Renewables Limited has considerable experience in wind turbines of all sizes, including small scale turbines for domestic use.

As an independent supplier and installer of wind turbines, we are not exclusively tied to any turbine manufacturer, which allows us to provide impartial and unbiased advice on wind turbines, so that the **right turbine** can be recommended for the **right site**.

With the introduction of the Feed-in Tariff Scheme (FITS), there has been an increasing interest in small scale wind turbines, as the economic benefits as well as the environmental benefits now make sense.

While Green Cat's environmental consultancy and project engineering work continues apace in the large scale wind turbine market, a different approach has been taken with small scale wind turbines. We offer a complete system package that includes site appraisal, planning and grid connection permission, turbine supply and installation, as well as local after sales support.

Green Cat are also able to utilize our extensive in-house expertise with large scale turbine projects as and when required.

- **Capabilities: Small Scale Wind Turbines**
- Site assessment (desktop and on-site) to assess the suitability for a small scale wind turbine
- Project management of complete installation process to provide peace of mind
- Installation and commissioning of the wind turbine system by Green Cat engineers, in accordance with Microgeneration Certification Scheme (MCS).
- Administration of planning & grid connection applications
- Registration of turbine for Feed In Tariff Scheme (FITS), so client can receive generation tariff payments.
- After-sales servicing and support.

Head Office - Covington Mill, Thankerton, Biggar, South Lanarkshire, ML12 6NE
